

# USING FENTANYL TEST STRIPS

- 1 Add about 1/2 teaspoon water to your empty baggie and mix well.
- 2 Hold blue end of test strip and dip other end into water. Don't go past the first blue line. Hold it there for 15 seconds.
- 3 Put test strip on flat surface. In less than a minute you'll start to see results appear.

**1 line = positive - Your product contains fentanyl**

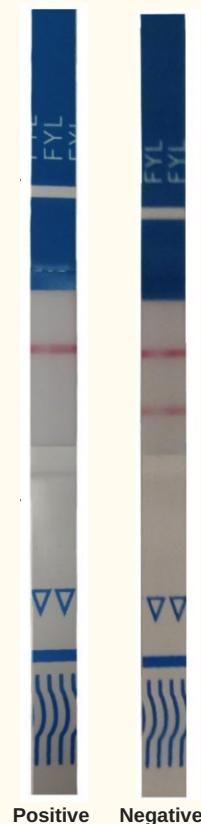

**2 lines = negative - Your product MAY contain a different fentanyl analogue not showing up positive. OR your sample *may not* contain fentanyl. It still *may not* be the drug you paid for.**

## STAYING SAFE

- If your product tests positive - **consider discarding** it if you have no or low tolerance for opioids. **Your risk of overdose is high.**
- **Don't use alone, take turns using and carry Narcan/Naloxone.**
- If injecting - **start low, shoot slow.** Do a **tester shot** if possible.
